AVIATION MANAGEMENT

Company profile

Structuring Aviation Opportunities.
Delivering Global Capability.

01 / COMPANY OVERVIEW

OneWorld Aviation Management

Established in 2001, OneWorld Aviation Management Ltd UK is a privately owned aviation advisory and business development company, supporting clients with tailored solutions across aircraft ownership, operational capability, commercial utilisation and strategic growth.

Our advisory approach focuses on practical, commercially sound and compliant outcomes, aligning regulatory requirements, operating structures and stakeholder objectives.

Leadership and perspective

The company's Chief Executive brings over 52 years' experience across fixed-wing and rotary-wing operations. This experience supports a broad understanding of aviation activity across operational, commercial, technical and strategic environments.

Aviation business development

OneWorld Aviation Management develops aviation solutions, identifies emerging market opportunities and shapes commercially robust business plans in response to industry challenges, client objectives and evolving market needs.

Our capabilities include airline acquisition advisory, aircraft appraisal, aircraft sourcing and remarketing, airline start-up support, flight crew training coordination, aircraft leasing suitability assessment, operating platform review and strategic aviation project development.

Clients and operating environments

We have delivered solutions to airlines, asset owners, leasing companies and major oil and mining operators. Business relationships across global regions, climates and geographic environments support our work in varied, remote and complex operating conditions.

These activities are supported by a practical understanding of the legal, technical, operational and compliance frameworks required in regulated aviation environments.

02 / CAPABILITIES AND HISTORIC ENGAGEMENTS

Airline and aircraft capability

Airline platforms and market entry

Development, acquisition and structuring of airline platforms, Air Operator Certificate (AOC) frameworks, low-cost carrier concepts, start-up airlines and joint venture aviation vehicles.

Historic initiatives include European AOCs and UK operating platforms, low-cost carrier development, start-up airline planning and commercial airline formation. AOC-related advisory includes operator selection and compliant platform development.

Aircraft assets leasing and technical support

Aircraft sourcing, evaluation, placement, leasing support, remarketing, de-registration, re-registration, technical review and post-maintenance support.

This capability includes aircraft recovery, delivery, asset transition, aircraft on ground (AOG) support and the commercial development of aircraft types for new operating roles.

Aircraft asset structuring encompasses ownership, leasing and special purpose vehicle (SPV) based deployment structures.

03 / COMMERCIAL AND OPERATIONAL FEASIBILITY

Routes logistics and infrastructure

Route cargo and logistics development

Assessment and development of passenger, cargo and logistics opportunities, including route economics, market volume studies, air cargo export models, island connectivity, mail movement, offshore logistics and dedicated airbridge concepts.

Passenger and cargo service evaluation considers opportunities, operating fit and deployment potential. Commercial aviation project development supports airline concepts, fleet strategy and aviation ventures.

Airport and airfield advisory

Airport and airfield feasibility, runway and infrastructure optimisation, aircraft performance assessment, operational suitability reviews and airfield audit work for public, private and industrial aviation users.

Remote and unpaved runway assessment

Assessment of runway suitability, operating limitations and aircraft performance in remote and austere environments, including remote unpaved runway analysis and design.

Operational suitability

The company's experience includes assessing remote airfield suitability, runway and aircraft limitations, infrastructure constraints and aviation support requirements for energy sector operations.

This supports the evaluation of aircraft deployment in challenging locations where access, performance, safety, logistics and operational reliability are critical.

04 / SPECIALIST AVIATION CAPABILITY

Special missions and operating support

Special mission aviation solutions

Assessment of aircraft suitability, with a focus on integrating aeromedical modules, supporting critical-care transport and evaluating firefighting delivery systems in relation to aircraft type and mission profile.

Government advisory

Strategic advisory to governments and institutions on aviation policy, infrastructure and economic development.

Oil and gas logistics support

Aviation logistics support and employee rotations, including Line Operations Safety Audits (LOSA) to monitor compliance and the integrity of third-party air operators' Safety Management Systems.

Flight crew provision and training

Flight crew provision and training solutions supported by structured competency-based training, operational standardisation and continuous skills development.

Coordination support addresses flight crew training requirements and operational readiness.

Mission and operating environment

Aircraft suitability, operating capability and the practical requirements of the proposed role are considered together.

05 / AIRCRAFT DEPLOYMENT AND MISSION SUITABILITY

Selected specialist experience

Remote operations

OneWorld Aviation Management has experience in the assessment of remote airfield suitability, runway and aircraft limitations, infrastructure constraints and aviation support requirements for energy sector operations.

Medical response and repatriation

The company has assessed aircraft suitability and operational capability for medical response and repatriation activity, including cabin suitability, mission-specific equipment, patient handling and operational procedures.

This specialist capability includes aircraft suitability and operational capability assessment for humanitarian transport, aeromedical evacuation and medical repatriation.

Private and business aviation support

Support for private aircraft ownership, management and value preservation complements the company's aircraft evaluation, asset structuring and operating platform capabilities.

Strategic aviation advisory

Strategic, commercial and operational guidance supports the assessment of aviation opportunities, informed by aircraft capability, the operating environment and the requirements of the proposed deployment.

Practical assessment

Access, aircraft performance, safety, logistics and operational reliability are central considerations in challenging operating environments.

06 / COMMERCIAL DISCIPLINE AND CONFIDENTIALITY

Approach and engagement

OneWorld Aviation Management assists clients where aircraft ownership, operational capability, regulatory compliance, commercial deployment and stakeholder interests need to align within a practical and commercially sound framework.

The company's approach typically focuses on preserving stakeholder control, reducing unnecessary balance sheet exposure, improving asset utilisation, creating hard currency revenue opportunities and supporting compliant operating structures. Projects may be tested on a limited scale before broader expansion.

Clarity discipline and control

OneWorld Aviation Management Ltd UK combines aviation sector experience, commercial insight and practical structuring capability to support clients in assessing, developing and implementing aviation opportunities.

By aligning aircraft assets, operational requirements, regulatory considerations and stakeholder objectives, the company helps create commercially focused aviation solutions designed to support sustainable long-term value across international markets.
